

Software Engineer – Project Manager

Company description

Specialized in software and application development, we adapt existing robots at the hardware and software level according to requests expressed by our commercial partners. We are based one hour from Paris in the town of Châlons-en-Champagne, and we provide robotics related solutions to challenges faced by medical professionals in institutions such as hospitals and associated care centres. We collaborate with companies like Cybedroid (France) or Pal Robotics (Spain).

Contact person: Jeremy Del Bonta

Function: Project Manager Engineer

Phone number: +33 3 52 83 00 42

Mail: contact@needabot.co

Job

Status: Permanent contract

Date: as soon as possible

Business travel: The position requires travel to plan for events and performances, and for testing and experimentation and installations - mainly within France

Salary: €35,000 to €50,000 per annum

Profile: Typically engineering school educated in software development

Description

At Needabot, we seek above all enthusiasts to complete our team! If you are versatile, you want to increase your skills and have direct responsibilities, it is definitely the door to push.

So that's for sure, our company is in Châlons en Champagne, but when you look a little more it means: a good salary, a housing not very expensive, a train that takes you to 1:41 in Paris (yes it is written there: [Http://voyages-sncf.com](http://voyages-sncf.com)), champagne, start-ups that grow and above all, us!

For the job, you must love robots, at least know one or two, because every day we work with some. If you developed already - in Python and C++, would be a good start, if you know the ROS universe it would even be better.

In fact, we are looking for a new colleague for our project manager. Someone who wants to embrace the same kind of job as him. Meaning: development, maintaining the robots, managing projects (time management, deadlines, monitoring and managing the team and reporting). Of course, he will be there to accompany you and train you at the beginning.

If you have ambition, we plan to open up to the rest of the world. We already go across France to intervene on the trade shows. We also work with a company in Spain so business trips are to be expected.

A glimpse of your day

9am: Small cafe with stand up meeting

9:15 am-10:00 am: You reorganize a little the planned work according to the problems encountered the day before, you support the team on your projects

10h-10.30 am: From the techno watch to sync with the latest innovations

10.30 am-12.30 pm: You code your dev part on the robot

12.30-1.30 pm: Small dish of the restaurant Le bocal next door (or to the Chinese who adores us), and a wild part of Smash Bros to ensure cohesion

1.30 pm-2:30 pm: Point with the ThinLab of Châlons on project strategies

2.30 pm-3:30 pm: Exchange with our preferred roboticists (vendors) to check the progress of the projects

3.30 pm-6pm: You join your team in the testing Institute to control the progress and to answer the questions of the nursing staff and the management team

Your profile

If:

You are an engineer,

You have 2 years of exp in computer development

You want to manage projects,

= > Send us your CV already!

Besides, it would be better if:

- You already worked in C++ and Python
- You are curious and source of proposals
- You know how to work independently and as a team
- You have a great ability to analyze, listen and understand
